OUTPATIENT SURGERY CENTER

NuBOOM was exactly what our Outpatient Surgery Center was looking for. We needed to upgrade our minimally invasive capacity, which meant ceiling service units. But a traditional system would be expensive due to construction costs and OR down time, not to mention approval agencies. The NuBOOM installation was completed over a weekend and ready for staff and surgeon in-service on Monday.

The various surgeons have been very pleased with the visual quality of the monitors, the flexibility of viewing images on multiple screens, the ease of placing the monitors in position. Our staff identified a couple of desired changes in how the monitors were mounted and how the nurses control station was configured. These ideas were quickly reviewed and implemented by CompView Medical.

Overall, our experience with NuBOOM has been very positive and we continue to evolve our use of the system. Arthroscopy and laparoscopy was our initial service areas for NuBOOM, but that has quickly evolved for use by Urology, GYN and GI endoscopy.
