

DOCS is a medical image management system that is as easy to use as a TV set!

This intuitive touchscreen system allows surgeons and perioperative teams the flexibility to view information and route images such as endoscopy video, fluoroscopy, and ultrasound to archives and printers. DOCS enables connectivity to all inter-operative imaging modalities, PACS, RIS, EMR, internet, and video conferencing to remotely located meeting participants.

"Anyone can come in and hang a monitor, but CompView made the system useable. The DOC's touchpanel really makes a big difference given the amount of equipment in the OR. It makes it easy to navigate the sea of on/off and control buttons on all the different models of equipment."

— **Matt Wayson, Technology Specialist**
Providence St. Vincent Medical Center

FEATURES	BENEFITS
Simple input touchscreen.	As easy to use as a TV set which nearly eliminates in-service training.
Up to 6 channels of information input.	Acquire images from multiple imaging modalities, hospital LAN, and other data sources.
Up to 7 displays for image viewing.	View images from all acquisition modalities, hospital LAN, internet, video conferencing, and other data.
Open architecture. Hospital owned source code.	Easily scalable. Protected investment.
Video conferencing capability.	Overcome collaborative learning challenges posed by geography.
Print and record capability.	Fast, reliable record keeping.
Proven, responsive installation process.	Minimal down-time. Flexible and customizable.
